

```
system("/usr/sbin/wpa_supplicant -Dnl80211 -iwlan0 -f /tmp/wpa_log -  
c/tmp/wpa_supplicant.conf -d -t -B &");
```

在/tmp/wpa\_log中查看是否有如下的字符串：

1. 针对WPA / WPA2加密方式

//1473218403.305655: wlan0: WPA: 4-Way Handshake failed - pre-shared key may be incorrect

2. WEP加密方式

//1473233833.786157: Line 5: Invalid WEP key length 10 - this network block will be ignored

进而确认密码是否错误
