

1: AlertDialog

AlertDialog最多支持三个按钮

例:

```
AlertDialog.Builder builder = new
AlertDialog.Builder(DialogActivity.this);
builder.setIcon(R.drawable.ic_launcher);
builder.setTitle("你确定要离开吗?");
builder.setMessage("你确定要离开吗?");
builder.setPositiveButton("确定", new DialogInterface.OnClickListener()
{
    public void onClick(DialogInterface dialog, int whichButton) {

    }

});
builder.setNegativeButton("取消", new DialogInterface.OnClickListener() {
    public void onClick(DialogInterface dialog, int whichButton){

    }

});
builder.create().show();
```

效果:

其它方法。。。。。。

1: 设置三个按键:

```
builder.setPositiveButton("确定", new
DialogInterface.OnClickListener() {
    public void onClick(DialogInterface dialog, int
whichButton) {
```

```

        }

        });

        builder. setNeutralButton ("取消", new
DialogInterface.OnClickListener() {

            public void onClick(DialogInterface dialog, int
whichButton) {

                }

            });

        builder.setNegativeButton("退出", new
DialogInterface.OnClickListener() {

            public void onClick(DialogInterface dialog, int
whichButton) {

                }

            });

```

2: 选择列表框

例:

```

        final String[] mItems =
{"item0","item1","itme2","item3","itme4","item5","item6"};

        final AlertDialog.Builder builder = new
AlertDialog.Builder(DialogActivity.this);

        builder.setTitle("列表选择框");

        builder.setItems(mItems, new DialogInterface.OnClickListener() {

            public void onClick(DialogInterface dialog, int which) {

                builder.setTitle("你选择的id为" + which + " , " +
mItems[which]);

                builder.show();

            }

        });

        builder.create().show();

```

效果:

列表选择框

item0

item1

itme2

item3

itme4

item5

你选择的id为3 , item3

item0

item1

itme2

item3

itme4

item5

3: 单项选择列表框

```
builder.setSingleChoiceItems(.....);
```

4: 多项选择列表框

```
builder.setMultiChoiceItems(items, checkedItems, listener);
```
