

理解：把多张表的数据 选择整合到一张表了（数据多用来显示），可以是临时的也可以是长时间的。

视图 是不能做删除和 修改，新增

```
CREATE VIEW pay(sname,scontact,cname,dstatus) AS
SELECT salesman.name,salesman.contact,customer.name,deal.status
FROM deal,salesman,customer
WHERE deal.salasman_id = salesman.id AND deal.customer_id = customer.id;
```

删除视图：

```
drop view view_name;
```

```
CREATE VIEW deal_view(id,sname,cname,status,fman,sum,bank,date,otime) AS
SELECT
deal.id,salesman.name,customer.name,deal.status,deal.follow_man,deal.sum,deal.bank,deal.date,deal.failed_operabl

FROM deal,salesman,customer
WHERE deal.sname = salesman.name AND deal.cname = customer.name;
```

```
CREATE VIEW all_view AS
SELECT *
FROM deal,salesman,customer
WHERE deal.sname = salesman.name AND deal.cname = customer.name;
```
