1：ProgressDialog

例：

```
                final ProgressDialog mProgressDialog = new
ProgressDialog(DialogActivity.this);
                mProgressDialog.setIcon(R.drawable.ic_launcher);
                mProgressDialog.setTitle("进度条窗口");

mProgressDialog.setProgressStyle(ProgressDialog.STYLE_HORIZONTAL);
                mProgressDialog.setMax(100);
                mProgressDialog.setButton("确定", new
DialogInterface.OnClickListener() {
                        public void onClick(DialogInterface dialog, int
whichButton){
                                //这里添加点击后的逻辑
                        }
                });
                mProgressDialog.setButton2("取消", new
DialogInterface.OnClickListener() {
                        public void onClick(DialogInterface dialog, int
whichButton) {
                                //这里添加点击后的逻辑
                        }
                });
                mProgressDialog.create().show();
                new Thread(new Runnable(){
                        public void run() {
                                int Progress = 0;
                                while(Progress < 100) {
                                        try {
                                                Thread.sleep(100);
                                                Progress++;

mProgressDialog.incrementProgressBy(1);  //自增1
                                        } catch (InterruptedException e) {
                                                e.printStackTrace();
```

```
                        }
                    }
                }
            }).start();
```

效果：
